

IB 2000 FRAME glazed partition | Karel de Grote University | Antwerp (Belgium)

A COMMITTED PARTNER FOR YOUR EDUCATION PROJECT

School buildings need to be more flexible than ever. New teaching methods, multifunctional spaces and changing student populations require layouts that can evolve over time. Modularity and a pleasant learning environment are no longer a luxury, but a necessity. That is exactly where Beddeleem makes the difference. We realise futureproof educational environments based on a broad vision of sustainability, innovation and excellence.

As a Belgian manufacturer, we develop partitions, climate ceilings, doors, acoustic solutions and loose furniture. In addition, as a Class 8 contractor (Category D), we are a reliable partner for complete interior fit-outs, from coordination through to final delivery.

With more than 75 years of experience, in-house R&D and production facilities in Belgium, we combine tailor-made solutions, flexibility and rigorous quality control. This enables us to support facility managers, architects, engineering consultants and contractors in creating forward-looking educational buildings that perform perfectly today while being ready for the needs of tomorrow.

EDUCATION PROJECTS DELIVERED BY BEDDELEEM

Academia Rapperswil | Rapperswil (Switzerland)
AG Stedelijk Onderwijs | Antwerp
Primary and Secondary School | Kasterlinden
GO! Atheneum Comenius | Koekelberg
GO! Primary School De Boomgaard | Kuurne
Francisco Ferrer University Waterside | Brussels
Karel de Grote University | Antwerp
VIB UGent Research Centre Bioversneller 3 | Zwijnaarde
Pleinlaan School Campus | Brussels
Don Bosco Secondary School | Sint-Pieters-Woluwe
VTI Technical Institute | Bruges
Ghent University (UGent) Monovolume UFO | Ghent

READY FOR THE SCHOOL OF TOMORROW?

Education is constantly evolving. That is why a school building should be much more than a fixed layout. With circular solutions from our own production facilities, we help create flexible learning environments that can easily adapt to new educational insights, changing functions and the needs of future generations.

EDUCATION

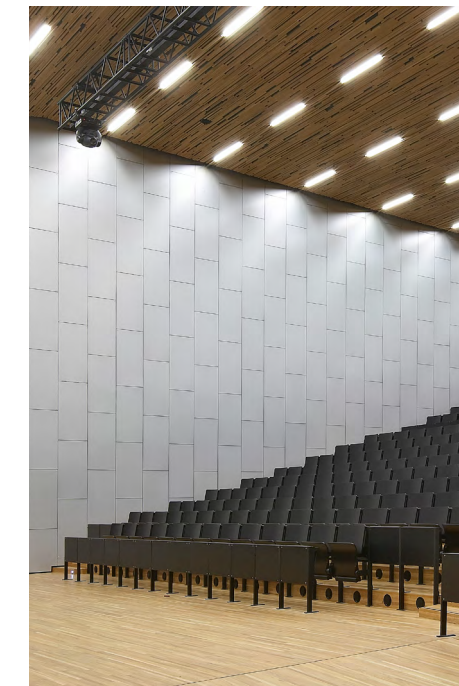

FIRST CLASS SOLUTIONS FOR YOUR PROJECT

FIT-OUT

Beddeleem is more than a manufacturer. We realise futureproof school workspaces based on a circular vision and valuable in-house expertise. Our partitions, climate ceilings, doors, acoustic solutions and loose furniture are seamlessly integrated with technical installations, painting works, flooring, fixed furniture and other finishing elements.

Beddeleem is your partner for educational environments where functionality, aesthetics and sustainability come together.

PARTITIONS

Beddeleem's modular partitions enable school buildings to adapt easily to changing needs without major renovation works, while often offering a lower total cost of ownership than traditional partitions. Within the extensive JB collection, you can select the look and technical performance that best suit your project, including acoustic performance, fire resistance, burglary resistance and airtightness.

Accessories such as suspended whiteboards, shelves, TV screen brackets and acoustic panels further enhance the functionality of the partitions.

CEILINGS

Clean indoor air and a comfortable temperature help maintain concentration. Exactly what students and teachers need to perform at their best. JB COOL climate ceilings integrate heating, cooling, lighting and acoustics into one smart, energy-efficient system. They remain fully accessible for maintenance and future modifications.

DOORS

School buildings are subject to intensive daily use. This is especially true for doors. From classrooms and offices to technical and multipurpose spaces, doors must deliver lasting durability, safety and reliable performance. Meet JB DOOR. Our interior doors provide high-level performance in terms of fire resistance, acoustic insulation, burglary resistance and mechanical durability.

FURNITURE

Those who prepare future generations for life every day deserve a workplace that combines comfort, functionality and aesthetics. With JB OFFICE, we furnish principals' offices, staff rooms, meeting areas, reception spaces and even cafeterias with loose furniture. Tailored to your overall interior concept and developed according to the same modular vision.

ABSORB

Noise distracting students from learning? What a waste. With JB ABSORB, we seamlessly integrate acoustic solutions into partitions and ceiling systems. Free-standing panels, wall coverings and ceiling baffles improve acoustic comfort without compromising the architectural design. For more focused students and lessons that truly stick.

CUSTOM

Every educational institution is unique. That is why we translate specific project requirements into tailor-made solutions. Within our existing JB collections, we develop technical and aesthetic innovations in terms of dimensions, finishes and technical performance. With our in-house R&D team, laboratory, production facilities and experienced installation teams, every detail is carefully considered. Together, we create educational environments that are as flexible as they are sustainable.

JB QBE box-in-box units create additional opportunities for dynamic space utilisation within educational environments.
