

A COMMITTED PARTNER FOR YOUR CARE ENVIRONMENT

A harmonious care environment goes beyond the medical. It's a warm, human setting that responds smoothly to the needs of the moment. Care, comfort, and well-being go hand in hand. Together, we create a futureproof, sustainable, and welcoming environment where care recipients feel at home and where your team gives their best, day after day.

Beddeleem creates work and care environments with a clear mission: "Realise the futureproof workspace through sustainability, innovation and excellence." As a Belgian manufacturer, we develop our own partitions, climate ceilings, doors, acoustic solutions, and loose furniture. At the same time, as a Class 8 contractor (Category D), we are a trusted partner for fit-out, from coordination to delivery.

With over 75 years of experience and in-house R&D and production in Belgium, we combine customization, flexibility, and precise quality control for your project. This is how we create environments that work today and are ready for tomorrow. With a passion for the healthcare sector.

BEDDELEEM

WE CARE ABOUT YOUR PROJECT

FIT-OUT

Beddeleem is more than a manufacturer. As a class 8 contractor (category D), we also take full responsibility for the complete interior finishing of your project. Our own relocatable partitions, climate ceilings, doors, acoustic solutions and loose furniture come together seamlessly with the right techniques, painting and flooring works, fixed furniture and much more.

We combine proven solutions with custom work where needed, both within our own collections and beyond. By thinking ahead and resolving technical conflicts during the preliminary study, we create clarity, calm and a smooth on-site process. The result: a care environment where everything fits. One single point of contact, from start to final delivery.

PARTITIONS

The care sector demands flexibility. Beddeleem's modular, relocatable partitions translate that need into an aesthetic, sustainable and innovative product. When care requirements change, your interior evolves along with them, within an existing care environment or as part of a new project, thanks to the circular nature of these partitions. Within the extensive JB collection, you can select the right look & feel and the required technical performance (acoustics, fire resistance, burglary resistance, airtightness, etc.).

CEILINGS

A ceiling is much more than a finished surface. We integrate sustainable technologies to ensure a comfortable and healthy indoor climate. Our JB COOL climate ceilings eliminate the need for conventional heating systems and air conditioning. No more draughts: just stable, pleasant indoor temperatures. Ventilation, lighting and acoustics are also seamlessly integrated into our ceiling systems. This results in greater comfort with lower energy consumption. Moreover, the plenum remains easily accessible for maintenance or future adjustments.

DOORS

With JB DOOR and our doors integrated in partitions, we offer an interior door for every space that performs both technically and aesthetically: from patient rooms to the secure closure of technical areas. The strong performance of our doors is fully aligned with the requirements of care environments: fire resistance up to EI120, acoustic insulation up to 49 dB, and burglary resistance up to RC3. They also successfully pass the most stringent tests for mechanical durability (class M4) and usage frequency (1,000,000 cycles – F8).

FURNITURE

From office chairs and meeting tables to storage cabinets and lockers, from seating for waiting and relaxation areas to living and treatment spaces: with JB OFFICE, we support daily use in every care environment. Comfort, durability and aesthetics go hand in hand. Together, we select loose furniture that fits perfectly within your overall concept: practical to use, pleasant to experience and flexible where needed. This is how we create environments that bring people together and provide space to heal.

ABSORB

Peace and quiet are essential for smooth recovery. With JB ABSORB, we add acoustic comfort to any space: subtle, stylish and effective. Acoustic panels or cassettes integrate seamlessly into our partitions and climate ceilings. Freestanding elements blend into the environment or act as a distinctive interior accent. The result: reduced noise levels and a calm, warm atmosphere for care users, staff and visitors.

CUSTOM

We translate specific needs into well-thought-out solutions. Together, we open doors to the care environment of tomorrow. From technical and aesthetic innovation (acoustics, fire resistance, security, dimensions, finishes, etc.) within our existing JB solutions to fully bespoke design - such as custom furniture - for a seamless end result. Our in-house R&D team, laboratory, production department and skilled installers are happy to contribute to your warm care environment, where efficient working and pleasant experience naturally come together.

Did you know?
Our JB FIREGLASS partitions are available with fire resistance ratings up to EI120.
