

JB 2000

Most complete relocatable partition

The JB 2000 of Beddeleem is the most complete and progressive system wall, with high sound insulation and fire resistance and a sleek appearance. Available as a full and glass wall.

Super modular & relocatable system

The JB 2000 relocatable partition is a super-modular system that - thanks to a minimum of parts - combines fast installation with maximum performance. It integrates most technical solutions and can be seamlessly transferred to another system wall or plasterboard wall.

The JB 2000 relocatable partition is a modulated, storey-high partition wall with a steel structure and panels made of clad wood chipboard or metal (with or without a finish for whiteboard function).

The design is characterised by tight, right angles, backward-drawn skirting boards and friezes and backward vertical hollow joints.

Applicable in all utility buildings

The relocatable partition wall can be used in all utility buildings and is ideal for creating subdivisions in office buildings.

The system wall has a limited number of components so that moving it can be carried out in a minimum of time and without specialised tools.

Timeless appearance: most sold system wall

Thanks to its timeless appearance, the JB 2000 is still the best-selling partitioning system in our range, which has been able to convince many customers over the years.
