

# JB 2000 FLUSH

## **Double glass partition**

The JB 2000 FLUSH relocatable partition wall from Beddeleem is a modulated, storey-high glass partition.

The system wall JB 2000 FLUSH is a glass partition that is compatible with the full partition system JB 2000 and can be used in all utility buildings and is ideal to create subdivisions in office buildings.

## **Glued glass**

The system consists of 2-shell window frame modules with glued glass that reduce placing and relocating the wall to child's play. Thanks to the glued glass, all parts of the wall are in the same plane, creating a contemporary and sleek look (the partition plane is entirely made of glass).

The system is available in different glass thicknesses, different fire resistance classes and horizontal stores can be installed in the wall.
