

JB WINDOW

Interior windows: for integration in fixed walls

JB WINDOW window units from Beddeleem are perfectly suited for installation in fixed walls (e.g. plasterboard, brickwork, ...). Like the JB DOOR door units, the frames of the JB WINDOW window units are also available in various materials (metal, plywood and solid wood frames).

Different glass panes can be interconnected by means of a vertical style or by placing glass against glass. This also applies to our fire-resistant versions (fire resistance up to 60 minutes).

Simple installation

JB WINDOW window assemblies are dry finishing systems with a limited number of parts, allowing them to be installed quickly and cleanly without the use of specialised tools.
